Gamma4

VENTURI POWER

The G4V HP is a revolutionary new cleaning head technology that incorporates the power of venturi with a proprietary flow path design that will change the way you circulate and clean your pool. Available on new pools, this technology can also be used to update existing systems.

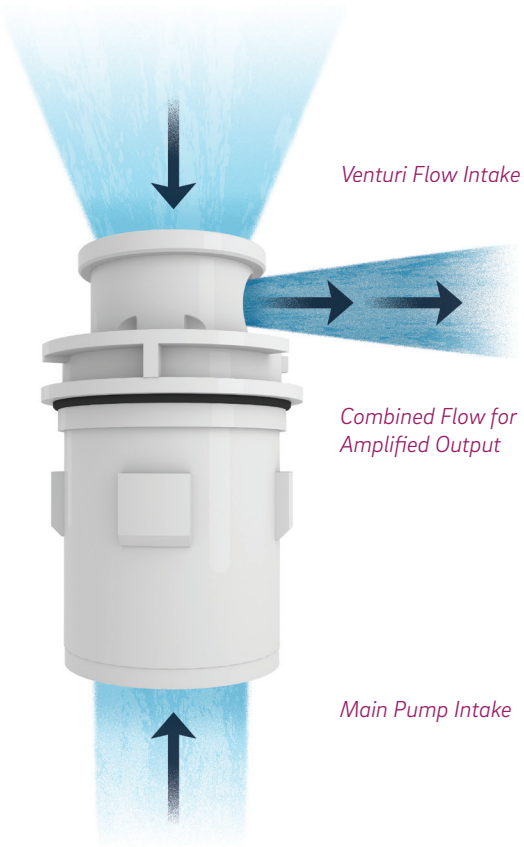
QuikClean®

In-floor cleaning and circluation systems

COOKE INDUSTRIES

Intelligent pool systems

The next stage of automated cleaning and circulation.



Available in six stylish colours.

Designed to work smarter.

The G4V HP significantly reduces pump speeds, lowers operating pressures, increases overall system performance and saves more than 50% on existing energy costs.

The Cooke Industries G4V HP cleaning head harnesses the power of venturi technology to vastly improve your system's cleaning capability. As your pump drives water through the nozzle, our patented venturi head design creates a vacuum which generates additional flow strength, augmenting your cleaning power at no extra cost.

Superior energy efficiency

Better system filtration

Cleaner and healthier water

Increased heating efficiency

Creates more even chemical distrbution

Reduced maintenance needs

23%

More powerful water flow at no additional energy cost.

33%

Wider coverage than standard cleaning heads.
