

The Cooke Industries Water Actuated Valve (Wave) is the control center of your cleaning and circulation system, directing the water to specific zones in your pool. Standard features such as a built-in speed control and "QuikStop" ensure optimum cleaning and circulation, as well as functional flexibility.

QuikClean®

In-floor cleaning and circulation systems

INDUSTRIES

Intelligent pool systems

Every intelligent pool system needs a brain.

The Wave contains no screens or filters and is self-cleaning. Its low-profile design provides for discreet installation adjacent to the pool, allowing for aesthetically compliant, hydraulic sound systems. Offering the highest flow in its class, the Wave is incredibly efficient and saves on energy costs.

Highest flow in its class

Pressure safe

Smooth transition - eliminates pressure spikes

Efficient and easy to maintain

Available in multiple port configurations
